

SECURITY CONSULTING

Senior staff members trained to evaluate your current level of physical security can assist any size company in planning a safe work environment for your employees and visitors. Typical topics researched and evaluated include:

- physical security
- policies and procedures
- internal reporting procedures
- emergency response
- information security
- employee training

At the conclusion of the evaluation, a detailed report will be submitted to management pinpointing areas of concern and outlining recommendations to strengthen the protection of the facility and the workforce. Members of our staff have been declared expert witnesses by the courts in areas including personal safety, personal security and corporate security. If needed, they are also available to offer expert testimony for our corporate clients or corporate counsel.
